Bulgin broadens distribution agreement with Acal BFi

Elektron Technology has announced the extension of its distribution agreement with Acal BFi to include the latest additions to the Bulgin and Arcoelectric product ranges. Under the new agreement, Acal will now offer Bulgin's popular Buccaneer[®] 6000 series of environmentally-sealed circular connectors, along with the recently launched Buccaneer 7000 series for mains power applications and the complete range of Arcoelectric appliance switches, indicator lights and fuseholders.

The all new Buccaneer 7000 Series features the Buccaneer range's tried and tested one-piece body construction, and has a unique twist locking system with positive feedback, providing quick and convenient, 'fit and forget' connectivity in less than quarter of a turn, without the need for technical expertise or specialist tools. Available in 2, 3, 6, 10 and 32 pole options, with a choice of fully interchangeable nickel plated, cast zinc alloy or UV-resistant, UL94-V0 flammability-rated plastic bodies, the Buccaneer 7000 Series will offer engineers and designers the greatest possible flexibility in system design.

Steve Smith, Country Sales Manager for UK and Ireland at Elektron Technology, commented: "As a leading supplier of advanced technologies from world leading manufacturers, Acal is a perfect fit for the Bulgin and Arcoelectric ranges, offering product designers and engineers a broad choice of connectors and switches to suit many applications. This extension to our existing agreement is a reflection of Acal's commitment to offering its customers the very best technologies available."
